

Best practice: Focus on patients – therapy facilities in the spotlight

The Christine Winter Therapy Center in Baden-Wuerttemberg has reinvented itself – with an impressive vision: a small practice has become a showcase project for innovative rehabilitation. Here, traditional therapy approaches are merged with state-of-the-art technology to create a unique combination that provides patients with the best possible support.

Particularly impressive is the use of neurological therapy equipment and medical training therapy, which are specifically designed to strengthen the muscles. Robot-assisted systems relieve the therapists and allow them to concentrate fully on the patients. Progress is not only noticeable, but also measurable – a decisive advantage for even more individualized care. This is where Maya the therapy software comes in, as an intelligent analysis tool that is integrated into the therapy to document progress and support the therapists. The focus is always on providing patients with the best possible support.

With this pioneering combination, the Christine Winter Therapy Centre is setting new standards in technology-based rehabilitation – an inspiring example of how modern technology can revolutionize and sustainably improve therapy.
